INTRODUCING OUR CARBON FOOTPRINT CALCULATOR

ISO 14067

Environmental action from public and private sectors will gather momentum in 2025 and beyond. Many institutions have set ambitious NET ZERO targets in the near future. The first step to NET ZERO is measuring your carbon footprint, which is difficult in a world of complex supply chains and unreliable data / claims.

In partnership with **ecoact** - a world leading French environmental consultancy, we have developed an industry-first carbon footprint calculator (named On Track) to report the impact of most of our products reliably. By assessing our entire supply chain—from raw materials to end-of-life—we provide reliable carbon footprint data in kgs of CO2 equivalent terms. Our tool is ISO-14067 certified by Bureau Veritas, ensuring accuracy and credibility in our data.

How It Works | ecoact

Using Life Cycle Assessment (LCA) methodology to assess the full environmental impact of a product going from extraction, transformation, production, packing, shipping, and use to end of life.

This award reduced **30%** carbon emission compared to a traditional award.

Our CHANGE ZERO collection products are funding ClimatePartner's renewable energy projects across Asia, primarily in solar and wind energy.

Printing Techniques

Having your logo printed with the widest range of printing techniques has never been so easy. These are the main techniques used to print your logo.

Digital printing 360

Compared to round screen, it's possible to print full colour images. UV ink technology does not emit volatile organic compounds to the atmosphere. When combined with white underprint – possibilities are limitless on transparent objects.

Laser engraving 360

Next level for inkless decoration, now possible on cylindrical products. Compared to conventional engraving, area is limited by circumference of cylindrical object. Can be used on mugs with handles. Best results on natural materials.

Sublimation

Printed with special inks on transfer paper, transferred to material using high temperatures. Photographs of quality of printed images, vivid colours and accurate small details. Requires white background and polymer material/coating.

Doming

Digitally printed full colour label on self-adhesive polymer foil, covered by a thick layer of transparent epoxy resin, which both protects the image, as well as giving a premium, glossy look and finish.

Digital Label

A flexible way to brand various products in almost any shape, self-adhesive polymer foil will fit in positions not accessible by other print techniques.

Digital Printing

UV flat bed inkjet technology allows you to print vivid full colour images on various materials – artificial and natural. Compared to Digital printing 360 – technique requires rigid products. White underprint possible.

Digital inlay

Xerographic full colour print on paper is a perfect way to convey message to Your customer. This technique is best for text and images, can be used: as a manual or "Thank You" notes or items where this is the only option available.

Button printing

A new way to stand out from the crowd with this full colour button. Printed using xerographic technology on paper, assembled with glossy finish to give premium look.

Digital Transfer

Digitally printed image on carrier foil with heat activated glue, applied in high temperature and pressure. Features full colour photographic quality and sharp details. Gives a premium look and feel, especially on textile materials.

Screen transfer

Conventional way of indirect printing using screen print. Can be applied on materials and places, where direct screen printing is not possible, in addition to different colours can be used on one image. Special colours available.

Ceramic transfer

Technique of printing image using special inks on paper, transferred to the item using water film and heated in extreme temperatures to assure durability. Special colours available. Recommended for ceramic materials.

Screen printing

Image exposed on a screen mesh, through which ink is squeezed to the marked surface. Main advantage is printing area on flat surfaces, almost any material, with possibility to use special colours. First choice for textile.

Pad printing

Image transferred to surface from engraved cliché by using a tampon. Most versatile marking technique on almost any rigid shape and material. Maximum of 4 colours. Special colours available. Cost efficient technique on small items.

Round screen printing

Evolution of screen printing allowing print on to cylindrical and conical products. Compared to pad printing, technique allows for a bigger printing area. Can be used on mugs with handles. Maximum of 1 colour. Special colours available.

Debossing

The engraved metal stamp is heated and is pressed against the material creating a permanent depression in the shape of the customer's artwork. Best results can be achieved on leather, PU, cardboard materials like notebooks, organizers.

Embroidery

Computerized stitching allows complex artworks on textile materials like bags, t-shirts, jackets, etc., as well as caps.

Laser engraving

Engraving is permanent, by selectively removing microscopic layers of material, thus creating visible marks on the surface. Colour varies depending on processed material. Best results on natural materials (metals, wood, bamboo, etc.).
